

2014-04-15 FISDM Technical Committee Meeting

Notebook: sturich's notebook

Created: 4/15/2014 3:28 PM

Updated: 4/15/2014 5:03 PM

Present:

- ☒ Steve Grise
- ☒ Aaron Cheuvront
- ☒ Patrick Wallis
- ☒ Craig McCabe
- ☒ Stu Rich
- ☒ Ned Rich
- ☒ Jeremiah Tamagna-Darr

Questions:

GitHub working for document distribution?

Attribution model - split or merged?

- Aaron - could we produce a split model template and allow customers to merge on their preference?

- Steve - Basic geometries and identities will be the easiest to agree on. Can provide examples of other tables that can be linked.

How to define attribution?

Naming conventions for foreign keys?

Which concepts are in scope?

- Assets?

- Patrick will create a template implementation of building systems & equipment

- Jeremiah & Ned will create a template of an abstract asset model with a couple of specific

attribute implementations

- Routing?

- Esri has not done much with the interior routing concept lately. Some questions about exactly which approach should be pursued. Craig and Aaron will get a meeting together offline to discuss Aaron's requirements. Steve suggested that Aaron might be able to demo and present at the U.C.

- Floor Sections?

- Aaron - could we do specific implementations or examples of each

- Stu will put together an example implementation

- CityEngine?

- Craig will review the current data model and provide feedback

- Data Driven Pages?

- Seems pretty complete at the moment - probably need to have some functional examples in

ArcMap.

- Work Spaces?

- Let's implement a pattern here. Steve will provide a pattern.

- Pattern for related entities? (Assets, employees, documents, etc.)

- PenBay will offer up an example

- Photo Point locations?

- PenBay will offer up an example

- Floor Geo-rasters

- PenBay will offer up an example

- Furniture Fixtures & Equipment

-- Patrick & Aaron will take this on for an example.
